

Still having doubts about getting the Covid-19 vaccine?

PLATINUM
HEALTH

Platinum Health (PH) wants to protect all our members from developing Covid-19, albeit mild or severe. One definite way of doing so is to be vaccinated. Vaccination is proven in all statistics to be protective against Covid-19.

To demonstrate how the Covid-19 vaccine has protected PH members, we compare statistics from the Third and Fourth Covid-19 waves.

	Third Covid-19 wave	Fourth Covid-19 wave
Members Hospitalised	645	182
	Most members were not protected by the Covid-19 vaccine as vaccinations were made available in a phased approach, as prescribed by the Department of Health.	Out of the 182 members hospitalised: Vaccinated: 57 (31.3%) Unvaccinated: 125 (68.7%)
Members who died as a result of Covid-19	131	4

There has been a marked decrease in the number of members being hospitalised and of those hospitalised, the majority were unvaccinated. There's also been significantly fewer deaths during the Fourth Wave. This can be attributed to the efficacy of the Covid-19 vaccine.
